

TNCC FULL COURSE

The TNCC Full Course is a 2-day course developed by the Emergency Nurses Association (ENA) specifically designed for students taking the course for the first time, or those students who prefer to participate in all the activities. This modality is for RN and Non-RN providers regardless of specialty.

After the completion of the course, the ENA will award students with 18.25 CNE hours for RNs, 16.25 CNE for Non-RN, and a 4- year certificate as a TNCC provider.

TNCC FULL COURSE SUMMARY

Length: 2-day course
For RNs and Non-RNs
taking TNCC for the first time
Total CEs for RNs 18.25
Total CEs for Non-RNs 15.25
Certification length: 4 years
Cost: \$315 Includes Book

Course Format

- **Manual:** The latest edition of the TNCC Provider Manual includes evidence-based content developed by trauma emergency experts. This 24-chapter, comprehensive manual is included in the registration of this FULL COURSE (\$315), books will be delivered to students within 28 days of class start. **Please note that registration will be closed 14 days before the start of class.**
- **Online modules:** Online modules with links to additional information are provided and assigned by the ENA prior to the course date. These modules allow students to learn at their own pace, apply what they have learned and receive immediate feedback, and refer back to information learned at any time. The modules are a complete case study process - taking students through the entire sequence of care.

Completion of these modules is mandatory prior to the start of class. A rescheduling fee of \$100 applies if unable to attend the course due to incomplete modules.

- **Live simulation:** TNCC includes training using both an individual and a team approach. Multiple trauma nursing process skills stations offer students the opportunity to practice trauma patient assessments and interventions in a controlled environment. Each student will be expected to lead a simulation in preparation for the skills station test.
- **Instructor-led classroom discussions and skills stations:** This full course offers plenty of opportunities for students to actively participate in class and share experiences and knowledge. **Students are expected to come prepared by reading the entire**

manual. These instructor-led discussions are not intended to provide basic knowledge. Instead, they are designed to allow students to clarify concepts and expand knowledge.

- **Testing:** after the completion of the course students will have the opportunity to complete a skills test station where they will put into practice the systematic approach learned during class. After the skills test, students will proceed to take an electronic, open-book, open-resource test - No more test anxiety!!
